

LHA Market State™ Alpha Seeker™ ETF

(MSVX)

Listed on Cboe BZX Exchange, Inc.

PROSPECTUS

May 8, 2020

The U.S. Securities and Exchange Commission (“SEC”) has not approved or disapproved of these securities or passed upon the accuracy or adequacy of this Prospectus. Any representation to the contrary is a criminal offense.

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of the Fund’s shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the Fund’s reports from your financial intermediary, such as a broker-dealer or bank. Instead, the reports will be made available on a website, and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. Please contact your financial intermediary to elect to receive shareholder reports and other Fund communications electronically.

You may elect to receive all future Fund reports in paper free of charge. Please contact your financial intermediary to inform them that you wish to continue receiving paper copies of Fund shareholder reports and for details about whether your election to receive reports in paper will apply to all funds held with your financial intermediary.

FUND SUMMARY

Investment Objective

The LHA Market State Alpha Seeker ETF (the “Fund”) seeks to provide positive returns across multiple market cycles that are generally not correlated to the U.S. equity or fixed income markets.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy, hold, and sell shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	1.10%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.00%
Acquired Fund Fees and Expenses ¹	0.06%
Total Annual Fund Operating Expenses	1.16%

¹ Estimated for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$118	\$368

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively-managed exchange-traded fund (“ETF”) and seeks to achieve its objective principally by investing long or short in instruments linked directly or indirectly to the performance and/or volatility of the S&P 500® Index based on models and analyses, described below, that seek to estimate the direction of the U.S. equity market. Such instruments may include index-based and other actively-managed ETFs; leveraged, inverse, and inverse-leveraged ETFs; exchange-traded notes (“ETNs”); options; and futures contracts. The Fund may also invest the remainder of its portfolio directly or indirectly in cash and cash equivalents.

The Fund seeks to achieve its objective by estimating the direction of the U.S. equity market and then using those estimates to select the Fund’s investments in long or short S&P 500 Index linked instruments and CBOE Volatility Index® (the “VIX® Index”) linked instruments. The Fund’s strategy primarily relies on proprietary statistical models and analyses of the volatility of the S&P 500 developed, owned, and maintained by Thompson Capital Management LLC (“Thompson Capital”), an affiliate of the Fund’s investment adviser. Portfolio net exposure is based on a proprietary process to quantify market risk by comparing volatility expectations across various time frames, as expressed by 30-day and 90-day implied volatility indexes and VIX futures. In general, a “long volatility” environment is one in which near-term volatility expectations are above longer-term volatility expectations. Similarly, a “short volatility” environment is characterized by lower near-term volatility expectations relative to longer-term expectations.

Each day, Thompson Capital's quantitative models and analyses seek to estimate the direction and strength of U.S. equity market volatility based on the movement of the VIX® Index, which utilizes real-time prices of options on the S&P 500 to reflect investors' consensus view of future (30-day) expected stock market volatility, and VIX Index futures and options prices. Such estimates are used by the Fund's investment adviser to determine the extent to which the Fund's exposure to the S&P 500 Index and/or the VIX Index will be long or short, or in cash. Based on the direction and strength of signals from Thompson Capital's models, the investment adviser determines on a discretionary basis in which instrument(s) to invest.

The Fund may invest in derivative instruments, such as options or futures contracts, to gain long or short exposure to the S&P 500 or VIX Index. Specifically, the Fund may invest in ETFs, ETNs, or derivative instruments linked to the returns of the S&P 500 or in VIX Index options or futures contracts (long or short). A futures contract is a standardized agreement to buy or sell a specific quantity of an underlying instrument (*e.g.*, the S&P 500 or VIX Index) at a specific price at a specific future time. Investments in derivative instruments, such as futures contracts, have the economic effect of creating financial leverage in the Fund's portfolio because such investments may give rise to losses that exceed the amount the Fund has invested in those instruments. Financial leverage will magnify, sometimes significantly, the Fund's exposure to any increase or decrease in prices associated with a particular reference asset resulting in increased volatility in the value of the Fund's portfolio. The Fund's strategy may result in returns for a single day or longer periods of time that are significantly higher or lower than the returns of the broader U.S. equity market.

The Fund may also purchase put or call options (or option spreads) on the VIX Index, the S&P 500, or in ETNs or ETFs that seek exposure to short-term VIX Index futures contracts. An ETN is an exchange-traded debt obligation of an investment bank, and the returns of an ETN are linked to the performance of a market index or derivatives linked to such index, such as VIX Index futures contracts. Because the Fund only purchases options and option spreads and does not sell (write) uncovered (naked) options, losses from the Fund's investments in options or option spreads are limited to the amount of the net premiums paid. The Fund's investments in such options or option spreads will generally involve premiums of less than 2% of the Fund's net assets during a given month.

Purchasing a call option gives the buyer the right to purchase shares of the reference asset at a specified price ("strike price") until a specified date ("expiration date") (American-style options) or at the expiration date (European-style options). The buyer of the call option pays an amount (premium) for buying the option. In the event the reference asset appreciates above the strike price, the buyer can exercise the option and receive the reference asset (for American-style options) or receive the difference between the value of the reference asset and the strike price (for European-style options) (which gain is offset by the premium initially paid), and in the event the reference asset declines in value, the call option may end up worthless and the Fund's loss is limited to the amount of premium it paid. The Fund's investments in call options and put options (described below) on the S&P 500 or the VIX Index are generally expected to be European-style options.

Purchasing a put option gives the buyer the right to sell shares of a reference asset at a strike price until the expiration date (American-style options) or at the expiration date (European-style options). The buyer of the put option pays an amount (premium) for buying the option. In the event the reference asset declines in value below the strike price and the Fund exercises its put option, the Fund will be entitled to deliver the reference asset (for American-style options) or receive the difference between the strike price and the value of the reference asset (for European-style options) (which gain is offset by the premium originally paid by the Fund), and in the event the reference asset closes above the strike price as of the expiration date, the put option may end up worthless and the Fund's loss is limited to the amount of premium it paid.

A call spread entails the purchase of a call option and the sale of a call option on the same reference asset with the same expiration date but a higher strike price. A put spread entails the purchase of a put option and the sale of a put option on the same reference asset with the same expiration date but a lower strike price. The premium received from the sale of the call or put options is generally expected to offset the cost to the Fund of the purchased options in exchange for limiting the maximum return from such options.

The Fund may also invest in leveraged, inverse, and inverse-leveraged ETFs. Leveraged ETFs seek to provide investment results that match a multiple of the performance of an underlying index (*e.g.*, three times the performance) for a single day. Inverse ETFs seek to provide investment results that match a negative (*i.e.*, the opposite) of the performance of an underlying index for a single day. Inverse-leveraged ETFs seek to provide investment results that match a negative multiple of the performance of an underlying index for a single day. Leveraged, inverse, and inverse-leveraged ETFs typically rely on derivative instruments to seek to obtain their investment objectives.

The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. The Fund's strategy may result in the active and frequent trading of the Fund's investments, which may result in significant portfolio turnover.

Principal Risks of Investing in the Fund

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with other funds. Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value per share (“NAV”), trading price, yield, total return and/or ability to meet its objectives. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Fund.”

- **Cash and Cash Equivalents Risk.** Holding cash or cash equivalents rather than securities or other instruments in which the Fund primarily invests, even strategically, may cause the Fund to risk losing opportunities to participate in market appreciation, and may cause the Fund to experience potentially lower returns than the Fund’s benchmark or other funds that remain fully invested. In rising markets, holding cash or cash equivalents will negatively affect the Fund’s performance relative to its benchmark.
- **Derivatives Risks.** The Fund’s derivative investments have risks, including the imperfect correlation between the value of such instruments and the underlying assets or index; the loss of principal, including the potential loss of amounts greater than the initial amount invested in the derivative instrument; and illiquidity of the derivative investments. The derivatives used by the Fund may give rise to a form of leverage. Leverage magnifies the potential for gain and may result in greater losses, which in some cases may cause the Fund to liquidate other portfolio investments at inopportune times (*e.g.*, at a loss to comply with limits on leverage and asset segregation requirements imposed by the Investment Company Act of 1940 (the “1940 Act”) or when the Adviser otherwise would have preferred to hold the investment) or to meet redemption requests. Certain of the Fund’s transactions in derivatives could also affect the amount, timing, and character of distributions to shareholders, which may result in the Fund realizing more short-term capital gain and ordinary income subject to tax at ordinary income tax rates than it would if it did not engage in such transactions, which may adversely impact the Fund’s after-tax returns. To the extent the Fund invests in such derivative instruments, the value of the Fund’s portfolio is likely to experience greater volatility over short-term periods.
- **Equity Market Risk.** The Fund has exposure to common stocks through its investments in S&P 500-linked instruments. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. Equity securities may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific industries, sectors, or companies in which the Fund directly or indirectly invests.
- **ETF Risks.** The Fund is an ETF, and, as a result of an ETF’s structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants (“APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Cash Redemption Risk.* The Fund’s investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. The Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

- *Trading.* Although Shares are listed for trading on Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **ETN Risk.** ETNs may be riskier than ordinary debt securities and may have no principal protection. The Fund’s investment in an ETN may be influenced by many unpredictable factors, including highly volatile commodities prices, changes in interest rates, and monetary and other governmental policies, action, and inaction. Investing in ETNs is not equivalent to investing directly in index components or the relevant index itself. Because ETNs are debt securities, they possess credit risk; if the issuer has financial difficulties or goes bankrupt, the investor may not receive the return it was promised.
- **Futures Contracts Risks.** A decision as to whether, when, and how to use futures involves the exercise of skill and judgment and even a well-conceived futures transaction may be unsuccessful because of market behavior or unexpected events. In addition to the risks associated with all derivatives, the prices of futures can be highly volatile, using futures can lower total return, and the potential loss from futures can exceed the Fund’s initial investment in such contracts and could be unlimited.
- **High Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its positions as frequently as daily, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect.
- **Investment Company Risk.** The risks of investing in other investment companies typically reflect the risks of the types of instruments in which the investment companies invest. By investing in another investment company, the Fund becomes a shareholder of that investment company and bears its proportionate share of the fees and expenses of the other investment company. The Fund may be subject to statutory limits with respect to the amount it can invest in other ETFs, which may adversely affect the Fund’s ability to achieve its investment objective. Investments in ETFs are subject to the “ETF Risks” described above.
- **Leveraged, Inverse, and Inverse-Leveraged ETFs Risk.** Leveraged, inverse, and inverse-leveraged ETFs (collectively, “Leveraged ETFs”) expose the Fund to all of the risks that traditional ETFs present (see “ETF Risks” above). All Leveraged ETFs rely to some degree, often extensively, on derivatives to achieve their objectives and, thus, the Fund is indirectly exposed to derivatives risk through its investments in Leveraged ETFs. Further, investments in Leveraged ETFs are subject to the risk that the performance of such ETF will not correlate with the underlying index as intended. Leveraged ETFs often “reset” daily, meaning that they are designed to achieve their stated objectives on a daily basis. Due to the effect of compounding, their performance over longer periods of time can differ significantly from the performance (or inverse of the performance) of their underlying index or benchmark during the same period of time. This effect can be magnified in volatile markets. Consequently, these investment vehicles may be extremely volatile and can potentially expose a Fund to complete loss of its investment.
- **Leverage Risk.** The Fund obtains investment exposure in excess of its net assets by utilizing leverage and may lose more money in market conditions that are adverse to its investment objective than a fund that does not utilize leverage.
- **Management Risk.** The Fund is actively managed and may not meet its investment objective if the quantitative models and/or analyses fail to identify the direction or strength of market movements or based on the Adviser’s success or failure to implement investment strategies for the Fund.
- **Models and Data Risk.** The Fund’s investments are heavily dependent on proprietary analyses that include the use of quantitative models that may evolve over time as well as information and data supplied by third parties (“Models and Data”). When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon may lead to the inclusion or exclusion of investments that would have been excluded or included had the Models and Data been correct and complete.
- **New Fund Risk.** The Fund is a recently organized management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements under Subchapter M of the Internal Revenue Code of 1986, as amended (“Code”) for qualification as a regulated investment company (“RIC”).

- **Options Risk.** Options enable the Fund to purchase exposure that is significantly greater than the premium paid. Consequently, the value of such options can be volatile, and a small investment in options can have a large impact on the performance of the Fund. The Fund risks losing all or part of the cash paid (premium) for purchasing options. Even a small decline in the value of a reference asset underlying call options or a small increase in the value of a reference asset underlying put options can result in the entire investment in such options being lost. Additionally, the value of the option may be lost if the Adviser fails to exercise such option at or prior to its expiration.
- **Tax Risk.** The Fund must meet certain requirements regarding the source of its income and the diversification of its assets, among other requirements, to qualify as a RIC under Subchapter M of the Code. The Fund's investments in certain VIX derivatives including VIX futures contracts may not generate qualifying income. To the extent the Fund invests in such instruments, the Fund will seek to restrict its income from such investments to a maximum of 10% of its gross income (when combined with its other investments that produce non-qualifying income) so as to qualify as a RIC, but it may not be able to determine with certainty whether certain investments will produce qualifying income. Failure to comply with the requirements to qualify as a RIC would have significant negative tax consequences to Fund shareholders.
- **Volatility Risk.** The Fund's derivative investments that are linked to equity market volatility levels can be highly volatile and may experience large losses. Trading in VIX Index futures contracts or VIX Index options, particularly contracts that are close to expiration, can be very volatile and can be expected to be very volatile in the future. The volatile nature of these instruments may have an adverse impact on the Fund beyond the impact of any changes in the VIX Index.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is also available on the Fund's website at www.lhafunds.com.

Management

Investment Adviser: Little Harbor Advisors, LLC (the "Adviser")

Portfolio Managers: Michael Thompson, CFA, and D. Matthew Thompson, CFA, each a portfolio manager for the Adviser, have been the Fund's portfolio managers since the inception of the Fund in May 2020.

Purchase and Sale of Shares

Shares are listed on the Exchange, and most investors will buy and sell Shares through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. Creation Units generally consist of 25,000 Shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the "Deposit Securities") and/or a designated amount of U.S. cash.

Investors may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information about the Fund, including its net asset value, market price, premiums and discounts, and bid-ask spreads is available on the Fund's website at www.lhafunds.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

ADDITIONAL INFORMATION ABOUT THE FUND

Investment Objective

The Fund's investment objective has been adopted as a non-fundamental investment policy and may be changed without shareholder approval upon written notice to shareholders.

Principal Risks of Investing in the Fund

This section provides additional information regarding the principal risks described in the Fund Summary above. As in the Fund Summary above, the principal risks below are presented in alphabetical order to facilitate finding particular risks and comparing them with other funds. Each risk described below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. Each of the factors below could have a negative impact on the Fund's performance and trading prices.

Cash and Cash Equivalents Risk. Holding cash or cash equivalents rather than securities or other instruments in which the Fund primarily invests, even strategically, may cause the Fund to risk losing opportunities to participate in market appreciation, and may cause the Fund to experience potentially lower returns than the Fund's benchmark or other funds that remain fully invested. In rising markets, holding cash or cash equivalents will negatively affect the Fund's performance relative to its benchmark.

Derivatives Risks. The Fund's derivative investments have risks, including the imperfect correlation between the value of such instruments and the underlying asset or index, which creates the possibility that the loss on such instruments may be greater than the gain in the value of the underlying asset or index; the loss of principal; and illiquidity of the derivative investments. The derivatives used by the Fund may, in certain circumstances, give rise to a form of financial leverage, which may magnify the risk of owning such instruments. The ability to successfully use derivative investments depends on the ability of the Adviser to predict pertinent market movements, which cannot be assured. In addition, amounts paid by the Fund as premiums and cash or other assets held in margin accounts with respect to the Fund's derivative investments would not be available to the Fund for other investment purposes, which may result in lost opportunities for gain.

Equity Market Risk. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises. If you held common stock, or common stock equivalents, of any given issuer, you would generally be exposed to greater risk than if you held preferred stocks and debt obligations of the issuer because common stockholders, or holders of equivalent interests, generally have inferior rights to receive payments from issuers in comparison with the rights of preferred stockholders, bondholders, and other creditors of such issuers.

Beginning in the first quarter of 2020, financial markets in the United States and around the world experienced extreme and in many cases unprecedented volatility and severe losses due to the global pandemic caused by COVID-19, a novel coronavirus. The pandemic has resulted in a wide range of social and economic disruptions, including closed borders, voluntary or compelled quarantines of large populations, stressed healthcare systems, reduced or prohibited domestic or international travel, supply chain disruptions, and so-called "stay-at-home" orders throughout much of the United States and many other countries. The fall-out from these disruptions has included the rapid closure of businesses deemed "non-essential" by federal, state, or local governments and rapidly increasing unemployment, as well as greatly reduced liquidity for certain instruments at times. Some sectors of the economy and individual issuers have experienced particularly large losses. Such disruptions may continue for an extended period of time or reoccur in the future to a similar or greater extent. In response, the U.S. government and the Federal Reserve have taken extraordinary actions to support the domestic economy and financial markets, resulting in very low interest rates and in some cases negative yields. It is unknown how long circumstances related to the pandemic will persist, whether they will reoccur in the future, whether efforts to support the economy and financial markets will be successful, and what additional implications may follow from the pandemic. The impact of these events and other epidemics or pandemics in the future could adversely affect Fund performance.

ETF Risks. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *APs, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Cash Redemption Risk.* ETFs generally are able to make in-kind redemptions and avoid being taxed on gain on the distributed portfolio securities at the Fund level. Because the Fund may effect redemptions partly or entirely in cash,

rather than in-kind, it may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. If the Fund recognizes gain on these sales, this generally will cause the Fund to recognize gain it might not otherwise have recognized, or to recognize such gain sooner than would otherwise be required if it were to distribute portfolio securities in-kind. The Fund generally intends to distribute these gains to shareholders to avoid being taxed on this gain at the Fund level and otherwise comply with the special tax rules that apply to it. This strategy may cause shareholders to be subject to tax on gains they would not otherwise be subject to, or at an earlier date than, if they had made an investment in a different ETF. Moreover, cash transactions may have to be carried out over several days if the securities market is relatively illiquid and may involve considerable brokerage fees and taxes. These brokerage fees and taxes, which will be higher than if the Fund sold and redeemed its shares principally in-kind, could be imposed on the Fund and thus decrease the Fund's NAV to the extent they are not offset by the creation and redemption transaction fees paid by purchasers and redeemers of Creation Units.

- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid/ask spread." The bid/ask spread varies over time for Shares based on trading volume and market liquidity, and is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund and/or increased market volatility may cause increased bid/ask spreads. Due to the costs of buying or selling Shares, including bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
- *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
- *Trading.* Although Shares are listed for trading on the Exchange and may be listed or traded on U.S. and non-U.S. stock exchanges other than the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to Exchange "circuit breaker" rules, which temporarily halt trading on the Exchange when a decline in the S&P 500[®] Index during a single day reaches certain thresholds (e.g., 7%, 13%, and 20%). Additional rules applicable to the Exchange may halt trading in Shares when extraordinary volatility causes sudden, significant swings in the market price of Shares. There can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares.

ETN Risk. An ETN is an exchange-traded debt obligation of an investment bank, and the returns of an ETN are linked to the performance of a market index or derivatives linked to such index. In addition to trading ETNs on exchanges, investors may redeem ETNs directly with the issuer on a weekly basis, typically in a minimum amount of 50,000 units, or hold the ETNs until maturity. ETNs may be riskier than ordinary debt securities and may have no principal protection. The Fund's investment in an ETN may be influenced by many unpredictable factors, including highly volatile commodities prices, changes in supply and demand relationships, trade, changes in interest rates, and monetary and other governmental policies, action, and inaction. Investing in ETNs is not equivalent to investing directly in index components or the relevant index itself. Because ETNs are debt securities, they possess credit risk; if the issuer has financial difficulties or goes bankrupt, the investor may not receive the return it was promised.

Futures Contracts Risks. The value of a futures contract tends to increase and decrease in tandem with the value of the underlying instrument. Depending on the terms of the particular contract, futures contracts are settled through either physical delivery of the underlying instrument on the settlement date or by payment of a cash settlement amount on the settlement date. A decision as to whether, when, and how to use futures involves the exercise of skill and judgment and even a well-conceived futures transaction may be unsuccessful because of market behavior or unexpected events. In addition to the risks associated with all derivatives, the prices of futures can be highly volatile, using futures can lower total return, and the potential loss from futures can exceed the Fund's initial investment in such contracts and could be unlimited.

High Portfolio Turnover Risk. Because the Fund may “turn over” some or all of its positions as frequently as daily, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect. While the turnover of certain derivative instruments is not deemed “portfolio turnover” for accounting purposes, the economic impact to the Fund is similar to what could occur if the Fund experienced high portfolio turnover (e.g., in excess of 100% per year).

Investment Company Risk. The Fund may invest in shares of investment companies, such as ETFs, that invest in a wide range of instruments designed to track the performance of a particular securities market index (or sector of an index) or that are actively managed. The risks of investment in these securities typically reflect the risks of the types of instruments in which the investment company invests. When the Fund invests in investment company securities, shareholders of the Fund bear indirectly their proportionate share of their fees and expenses, as well as their share of the Fund’s fees and expenses. As a result, an investment by the Fund in an investment company will cause the Fund’s operating expenses (taking into account indirect expenses such as the fees and expenses of the investment company) to be higher and, in turn, performance to be lower than if it were to invest directly in the instruments underlying the investment company. Additionally, there may not be an active trading market available for shares of some ETFs. Shares of an ETF may also trade in the market at a premium or discount to their NAV.

Leveraged, Inverse, and Inverse-Leveraged ETFs Risk. Leveraged ETFs expose the Fund to all of the risks that traditional ETFs present (see “ETF Risks” above). Leveraged ETFs, including certain ETNs tracking a leveraged benchmark, seek to provide investment results that match a multiple (positive or negative) of the performance of an underlying index (the “Index”) (e.g., three times the inverse performance). Leveraged ETFs rely to some degree, often extensively, on derivatives to achieve their objectives and, thus, the Fund is indirectly exposed to derivatives risk through its investments in these Leveraged ETFs. Further, investments in Leveraged ETFs are subject to the risk that the performance of such Leveraged ETF will not correlate with the Index as intended. Leveraged ETFs often “reset” daily, meaning that they are designed to achieve their stated objectives on a daily basis. Due to the effect of compounding, their performance over longer periods of time can differ significantly from the performance (or inverse of the performance) of their Index or benchmark during the same period of time. This effect can be magnified in volatile markets. Consequently, these investment vehicles may be extremely volatile and can potentially expose the Fund to complete loss of its investment.

Leverage Risk. The Fund obtains investment exposure in excess of its net assets by utilizing leverage and may lose more money in market conditions that are adverse to its investment objective than a fund that does not utilize leverage.

Management Risk. The Fund is actively managed and may not meet its investment objective if the quantitative models and/or analyses fail to identify the direction or strength of market movements or based on the Adviser’s success or failure to implement investment strategies for the Fund.

Models and Data Risk. When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. For example, by relying on Models and Data, the Adviser may be induced to buy certain investments at prices that are too high, to sell certain other investments at prices that are too low, or to miss favorable opportunities altogether. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful.

Some of the models used by the Adviser for the Fund are predictive in nature. The use of predictive models has inherent risks. For example, such models may incorrectly forecast future behavior, leading to potential losses on a cash flow and/or a mark-to-market basis. In addition, in unforeseen or certain low-probability scenarios (often involving a market disruption of some kind), such models may produce unexpected results, which can result in losses for the Fund. Furthermore, because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

New Fund Risk. The Fund is a recently organized, non-diversified management investment company with a limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decision.

Non-Diversification Risk. The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements under Subchapter M of the Code for qualification as a RIC.

Options Risk. Options enable the Fund to purchase exposure that is significantly greater than the premium paid. Consequently, the value of such options can be volatile, and a small investment in options can have a large impact on the performance of the Fund. The Fund risks losing all or part of the cash paid (premium) for purchasing options. Even a small decline in the value of a reference asset underlying call options or a small increase in the value of a reference asset underlying put options can result in the entire investment in such options being lost. The Fund's options also may fail to track the performance of their underlying reference asset, which may limit the effectiveness of the Fund's strategy.

Tax Risk. To qualify as a RIC under Subchapter M of the Code, the Fund must meet certain requirements regarding the source of its income and the diversification of its assets, among other requirements. Specifically, the Fund must derive at least 90% of its gross income each taxable year from "qualifying income" and diversify its assets as described in more detail in the Fund's Statement of Additional Information ("SAI").

Certain of the Fund's investments, including certain VIX futures and other VIX derivatives, may not generate qualifying income. To the extent the Fund invests in such instruments, the Fund will seek to restrict its income from such investments to a maximum of 10% of its gross income (when combined with its other investments that produce non-qualifying income) so as to qualify as a RIC, but it may not be able to determine with certainty whether certain investments will produce qualifying income. For example, it is possible that the Internal Revenue Service ("IRS") or the courts may reach different conclusions concerning investments for which there currently is no IRS precedent or that the IRS may, in the future, articulate tax positions that are adverse to the Fund's determinations.

In addition, for purposes of satisfying the asset diversification test (as described more fully in the SAI) it may be difficult for the Fund to identify the "issuer" of certain Fund investments including derivatives investments. There is a risk that the IRS could make an adverse determination with respect to identifying the issuer of certain Fund investments, such as derivative investments, and could disagree with the Fund's valuation of the underlying issuers to a particular derivative. Such an adverse determination could, therefore, jeopardize the Fund's status as a RIC, which would ultimately affect a shareholder's return on its investment in the Fund.

If the Fund failed to qualify as a RIC for any taxable year (but was eligible to and did cure the failure) it would incur potentially significant additional federal income tax expense. If, on the other hand, the Fund failed to so qualify for any taxable year, and was ineligible to or otherwise did not cure the failure, such a result could cause investors to incur higher tax liabilities than they otherwise would have incurred and would have a negative impact on Fund returns. For example, the Fund would be subject to income tax on its taxable income at the corporate rate, with the consequence that its income available for distribution to shareholders would be reduced. If the Fund attempted to re-qualify for taxation as a RIC, the Fund might be required to recognize unrealized gains, pay substantial taxes and interest and make certain distributions. In such event, the Board of Trustees' may determine to reorganize or close the Fund or materially change its investment objective and strategies.

Volatility Risk. The Fund's derivative investments that are linked to equity market volatility levels can be highly volatile and may experience large losses. Trading in VIX Index futures contracts or VIX Index options, particularly contracts that are close to expiration, can be very volatile and can be expected to be very volatile in the future. The volatile nature of these instruments may have an adverse impact on the Fund beyond the impact of any changes in the VIX Index.

TEMPORARY DEFENSIVE POSITIONS

From time to time, the Fund may take temporary defensive positions that are inconsistent with its principal investment strategies in attempting to respond to adverse market, economic, political, or other conditions. In such instances, the Fund may hold up to 100% of its assets in cash; short-term U.S. government securities and government agency securities; investment grade money market instruments; money market mutual funds; investment grade fixed-income securities; repurchase agreements; commercial paper; cash equivalents; and ETFs that principally invest in the foregoing instruments. As a result of engaging in these temporary measures, the Fund may not achieve its investment objective.

PORTFOLIO HOLDINGS INFORMATION

Information about the Fund's daily portfolio holdings is available at www.lhafunds.com. A complete description of the Fund's policies and procedures with respect to the disclosure of the Fund's portfolio holdings is available in the Fund's SAI.

MANAGEMENT

Investment Adviser

Little Harbor Advisors, LLC, 30 Doaks Lane, Marblehead, Massachusetts 01945, serves as investment adviser to the Fund. The Adviser is responsible for the day-to-day management of the Fund's portfolio and has overall responsibility for the administration of the Fund, including the investment and reinvestment of Fund assets and the selection of broker-dealers to execute purchase and sale transactions. The Adviser also arranges for transfer agency, custody, fund administration, and all other related services necessary for the Fund to operate. The Adviser was founded in 2012 and provides discretionary investment services to a private collective investment fund and the Fund.

For the services it provides to the Fund, the Fund pays the Adviser a unified management fee, which is calculated daily and paid monthly, at an annual rate of 1.10% of the Fund's average daily net assets. Under the Investment Advisory Agreement, the Adviser has agreed to pay all expenses incurred by the Fund except for interest charges on any borrowings, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act, and the unified management fee payable to the Adviser.

The Adviser shall not be liable to the Trust or any shareholder for anything done or omitted by it, except acts or omissions involving willful misfeasance, bad faith, negligence or reckless disregard of the duties imposed upon it by its agreement with the Trust or for any losses that may be sustained in the purchase, holding, or sale of any security.

The basis for the Board of Trustees' approval of the Fund's Investment Advisory Agreement will be available in the Fund's first Annual or Semi-Annual Report to Shareholders.

Portfolio Managers

Michael Thompson, CFA, and D. Matthew Thompson, CFA (together, the "Portfolio Managers"), have joint and primary responsibility for the day-to-day management of the Fund.

Michael Thompson, CFA. Michael Thompson joined the Adviser as a portfolio manager in 2020 and has over 23 years of experience constructing and managing portfolios with a focus on volatility and risk management strategies. He originally co-developed a VIX trading strategy with his brother, D. Matthew Thompson, in October of 2011 while employed at Hills Capital as a portfolio manager. In 2013, Michael Thompson began trading the VIX trading strategy directly in the futures market for the proprietary trading desk of ED&F Man Ltd and as a commodity trading advisor, first as a principal of Advocate Asset Management LLC and subsequently for Typhon Capital Management LLC. In 2015, he became the Chief Investment Officer at Kaizen Advisory LLC, where he helped to launch the securities products currently managed by Thompson Capital. In 2019, Michael Thompson and his brother created Thompson Capital where Michael Thompson is the Chief Investment Officer, Chief Compliance Officer, Portfolio Manager, and a trader. Thompson Capital became an affiliate of the Adviser in 2020. Michael Thompson received his Bachelor of Science in Economics from the University of Illinois/Champaign in 1996 and is a member of the CFA Society of Chicago.

D. Matthew Thompson, CFA. Matthew Thompson joined the Adviser as a portfolio manager in 2020 and has over 20 years of capital markets and investing experience, focusing on futures trading with an emphasis on VIX-related exchange-traded products. From July 2013 through September of 2014, he traded the VIX trading strategy directly in the futures market for the proprietary trading desk of ED&F Man Ltd and as a commodity trading advisor, first as a principal of Advocate Asset Management LLC and subsequently for Typhon Capital Management LLC. In 2015, Matthew Thompson became the Director of Research at Kaizen Advisory LLC. In 2019, he and his brother created Thompson Capital where Matthew Thompson is the Director of Research, Portfolio Manager, and a trader. Thompson Capital became an affiliate of the Adviser in 2020. Matthew Thompson received his Bachelor of Science in Economics from the University of Illinois/Champaign in 1999 and is a member of the CFA Society of Chicago.

The Fund's SAI provides additional information about each Portfolio Manager's compensation structure, other accounts that the Portfolio Managers manage, and their ownership of Shares.

The Portfolio Managers' Prior Performance

The performance information shown below represents the prior performance of the Alpha Seeker strategy as managed by the Fund's Portfolio Managers in certain of its separately managed accounts. The Portfolio Managers have managed the Alpha Seeker strategy continuously since January 1, 2015 in substantially the same manner. The Portfolio Managers do not advise any pooled investment vehicles other than the Fund that have investment strategies that are substantially similar to the Fund, and the performance below reflects the asset-weighted composite of time-weighted returns for all accounts managed by the Portfolio Managers using the Alpha Seeker strategy since January 1, 2015 and for which daily performance information is available (collectively, the "Alpha Seeker Composite").

All returns of the Alpha Seeker Composite are presented after the deduction of the composite fees and expenses, including investment advisory fees, brokerage commissions, and execution costs paid by the composite accounts without provision for federal or state income taxes. The performance for the Alpha Seeker Composite does not reflect any sales loads or placement fees.

The fees and expenses for substantially all of the separately managed accounts included in the Alpha Seeker Composite were higher than what is estimated for the Fund; therefore, if the composite accounts had the Fund's estimated expense structure, the performance results of the Alpha Seeker Composite during that time period would have been higher.

The separately managed accounts included in the Alpha Seeker Composite are not registered mutual funds in the U.S. and are not subject to the same types of expenses as the Fund or to the diversification requirements, specific tax restrictions, and investment limitations imposed on the Fund by the 1940 Act, or the Code, which, if applicable, may have adversely affected the performance results of the Alpha Seeker Composite.

Investors should be aware that the use of a methodology different from that used to calculate the Fund’s performance could result in different performance data. The methodology used to calculate the Alpha Seeker Composite’s performance information differs from the SEC required methodology for the Fund. The performance returns are calculated by an independent third-party.

Prior performance of the Alpha Seeker Composite is not indicative of the Fund’s future performance.

The performance data below is for the Alpha Seeker Composite and is not the performance results of the Fund.

⁽²⁾ The Portfolio Managers have managed the Alpha Seeker Composite strategy continuously, and in substantially the same manner, since the Composite’s inception date of January 1, 2015.

HOW TO BUY AND SELL SHARES

The Fund issues and redeems Shares at NAV only in Creation Units. Only APs may acquire Shares directly from the Fund, and only APs may tender their Shares for redemption directly to the Fund, at NAV. An AP must be (i) a broker-dealer or other participant in the clearing process through the Continuous Net Settlement System of the National Securities Clearing Corporation (“NSCC”), a clearing agency that is registered with the SEC; or (ii) a Depository Trust Company (“DTC”) participant (as discussed below). In addition, each AP must execute a Participant Agreement that has been agreed to by the Distributor, and that has been accepted by the Transfer Agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

Most investors buy and sell Shares in secondary market transactions through brokers. Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The DTC or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC’s participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or “street name” through your brokerage account.

Frequent Purchases and Redemptions of Shares

The Fund imposes no restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by Fund shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with the Fund, are an essential part of the ETF process and help keep Share trading prices in line with NAV. As such, the Fund accommodates frequent purchases and redemptions by APs. However, the Board has also determined that frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, the Fund employs fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by the Fund in effecting trades. In addition, the Fund and the Adviser reserve the right to reject any purchase order at any time.

Determination of NAV

The Fund's NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange ("NYSE"), generally 4:00 p.m. Eastern Time, each day the NYSE is open for business. The NAV is calculated by dividing the Fund's net assets by its Shares outstanding.

In calculating its NAV, the Fund generally values its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If such information is not available for a security held by the Fund or is determined to be unreliable, the security will be valued at fair value estimates under guidelines established by the Board (as described below).

Fair Value Pricing

The Board has adopted procedures and methodologies to fair value Fund securities whose market prices are not "readily available" or are deemed to be unreliable. For example, such circumstances may arise when: (i) a security has been de-listed or has had its trading halted or suspended; (ii) a security's primary pricing source is unable or unwilling to provide a price; (iii) a security's primary trading market is closed during regular market hours; or (iv) a security's value is materially affected by events occurring after the close of the security's primary trading market. Generally, when fair valuing a security, the Fund will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer's business, recent trades or offers of the security, general and/or specific market conditions and the specific facts giving rise to the need to fair value the security. Fair value determinations are made in good faith and in accordance with the fair value methodologies included in the Board-adopted valuation procedures. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the security upon the sale of such security.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by registered investment companies in the securities of other investment companies, including Shares. Registered investment companies are permitted to invest in the Fund beyond the limits set forth in section 12(d)(1), subject to certain terms and conditions set forth in an SEC exemptive order issued to the Adviser, including that such investment companies enter into an agreement with the Fund.

Delivery of Shareholder Documents – Householding

Householding is an option available to certain investors of the Fund. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Fund is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you are currently enrolled in householding and wish to change your householding status, please contact your broker-dealer.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

The Fund intends to pay out dividends, if any, and distribute any net realized capital gains to its shareholders at least annually. The Fund will declare and pay capital gain distributions, if any, in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Fund. Your investment in the Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

The Tax Cuts and Jobs Act (the “Tax Act”) made significant changes to the U.S. federal income tax rules for taxation of individuals and corporations, generally effective for taxable years beginning after December 31, 2017. Many of the changes applicable to individuals are temporary and only apply to taxable years beginning after December 31, 2017 and before January 1, 2026. There are only minor changes with respect to the specific rules applicable to a RIC under the Code, such as the Fund. The Tax Act, however, made numerous other changes to the tax rules that may affect shareholders and the Fund. You are urged to consult your own tax advisor regarding how the Tax Act affects your investment in the Fund.

The Fund intends to elect and qualify each year for treatment as a RIC under the Code. If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, the Fund’s failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when the Fund makes distributions, when you sell your Shares listed on the Exchange; and when you purchase or redeem Creation Units (institutional investors only).

Taxes on Distributions

The Fund intends to distribute, at least annually, substantially all of its net investment income and net capital gains. For federal income tax purposes, distributions of investment income are generally taxable as ordinary income or qualified dividend income. Taxes on distributions of capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned his or her Shares. Sales of assets held by the Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by the Fund for one year or less generally result in short-term capital gains and losses. Distributions of the Fund’s net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by the Fund as capital gain dividends (“Capital Gain Dividends”) will be taxable as long-term capital gains, which for non-corporate shareholders are subject to tax at reduced rates of up to 20% (lower rates apply to individuals in lower tax brackets). Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Distributions reported by the Fund as “qualified dividend income” are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided holding period and other requirements are met. “Qualified dividend income” generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that the Fund received in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Certain of the Fund’s investment strategies may limit its ability to make distributions eligible for the reduced rates applicable to qualified dividend income.

Certain of the Fund’s investments may be subject to complex provisions of the Code that, among other things, may affect the Fund’s ability to qualify as a RIC, affect the character of gains and losses realized by the Fund (*e.g.*, may affect whether gains or losses are ordinary or capital), accelerate recognition of income to the Fund and defer losses. These rules could therefore affect the character, amount and timing of distributions to shareholders. These provisions also may require the Fund to mark to market certain types of positions in its portfolio (*i.e.*, treat them as if they were closed out) which may cause the Fund to recognize income without the Fund receiving cash with which to make distributions in amounts sufficient to enable the Fund to satisfy the RIC distribution requirements for avoiding income and excise taxes. The Fund intends to monitor its transactions, intends to make appropriate tax elections, and intends to make appropriate entries in its books and records to mitigate the effect of these rules and preserve the Fund’s qualification for treatment as a RIC. To the extent the Fund invests in an ETF or underlying fund that is taxable as a RIC, the rules applicable to the tax treatment of complex securities will also apply to the ETF or underlying fund that also invests in such complex securities and investments.

Certain derivative investments by the Fund, such as exchange-traded products and over-the-counter derivatives, may not produce qualifying income for purposes of the “qualifying income requirement” (described in the section entitled “Federal Income Taxes” in the SAI), which must be met in order for the Fund to maintain its status as a RIC under the Code. In addition, the determination of the value and the identity of the issuer of such derivative investments are often unclear for purposes of the “diversification requirement” (described in the section entitled “Federal Income Taxes” in the SAI). The Fund intends to carefully monitor such

investments to ensure that any non-qualifying income does not exceed permissible limits and to ensure that it is adequately diversified under the “diversification requirement”. The Fund, however, may not be able to accurately predict the non-qualifying income from these investments and there are no assurances that the IRS will agree with the Fund's determination of the “diversification requirement” with respect to such derivatives. Failure of the “diversification requirement” might also result from a determination by the IRS that financial instruments in which the Fund invests are not securities.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from the Fund.

U.S. individuals with income exceeding specified thresholds are subject to a 3.8% Medicare contribution tax on all or a portion of their “net investment income,” which includes interest, dividends, and certain capital gains (generally including capital gains distributions and capital gains realized on the sale of Shares). This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by the Fund before your investment (and thus were included in the Shares' NAV when you purchased your Shares).

You may wish to avoid investing in the Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable even though it may economically represent a return of a portion of your investment.

If the Fund's distributions exceed its earnings and profits, all or a portion of the distributions made for a taxable year may be recharacterized as a return of capital to shareholders. A return of capital distribution will generally not be taxable, but will reduce each shareholder's cost basis in Shares and result in a higher capital gain or lower capital loss when the Shares are sold. After a shareholder's basis in Shares has been reduced to zero, distributions in excess of earnings and profits in respect of those Shares will be treated as gain from the sale of the Shares.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by the Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. The Fund may, under certain circumstances, report all or a portion of a dividend as an “interest-related dividend” or a “short-term capital gain dividend,” which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met.

The Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that he, she or it is not subject to such withholding.

Taxes When Shares are Sold on the Exchange

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. The ability to deduct capital losses may be limited.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP's aggregate basis in the securities delivered, plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP's basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The IRS may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing “wash sales” (for an AP who does not mark-to-market their holdings), or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less.

The Fund may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Fund may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment in the proceeds paid upon the redemption of Creation Units.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Fund. It is not a substitute for personal tax advice. You also may be subject to state and local tax on Fund distributions and sales of Shares. Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled "Federal Income Taxes" in the SAI.

DISTRIBUTION

The Distributor, Quasar Distributors, LLC, is a broker-dealer registered with the SEC. The Distributor distributes Creation Units for the Fund on an agency basis and does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Fund or the securities that are purchased or sold by the Fund. The Distributor's principal address is 111 East Kilbourn Avenue, Suite 1250, Milwaukee, Wisconsin 53202.

The Board has adopted a Distribution and Service Plan (the "Plan") pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year for certain distribution-related activities and shareholder services.

No Rule 12b-1 fees are currently paid by the Fund, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of the Fund's assets, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

The Fund is new and therefore does not have any information regarding how often Shares traded on the Exchange at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of the Fund.

ADDITIONAL NOTICES

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange makes no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the ability of the Fund to achieve its objective. The Exchange is not responsible for, nor has it participated in the determination of, the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser and the Fund make no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly.

FINANCIAL HIGHLIGHTS

The Fund has not commenced operations prior to the date of this Prospectus and therefore does not have financial information.
